

MBAZZI RIVERSIDE HIGH SCHOOL

MRHS ICT CLUB MASTER

User Manual

The administrator handbook for the club management platform:
members, cabinet, meetings, attendance, courses, projects, reports,
certificates, finance, equipment, analytics, accounts, permissions,
colour schemes, screen sizes, backups and hosting.

Generated 2026-10-06 - 30 sections - Hosted on Vercel as a static site

Contents

1. **Getting started**
Sign in, find your way around and understand how the club data is organised.
2. **Roles and permissions**
Who can see and change what.
3. **Dashboard**
The morning briefing: what is happening in the club right now.
4. **Members**
The register of every club member, with linked courses, projects and certificates.
5. **Cabinet and leadership**
The thirteen club positions, their holders, terms of office and history.
6. **Meetings and minutes**
Schedule meetings, take minutes, record decisions and turn them into tasks.
7. **Attendance**
One recorder for meetings, courses, activities, training and events.
8. **Courses and training**
Club courses, enrolment, lessons, progress and completion.
9. **Activities**
Exhibitions, competitions, workshops, outreach and every club event.
10. **Projects**
Member projects from problem statement to results, with teams and tasks.
11. **Reports**
Weekly, monthly, termly, activity, project, training, meeting and annual reports.
12. **Certificates**
Issue, print and publicly verify club certificates.
13. **Notes & Resources**
The club library: lesson notes, tutorials, past papers, templates and useful links.
14. **Membership and cabinet cards**
Print CR80 cards for members and club leaders, one at a time or ten to a sheet.
15. **Announcements**
Noticeboard messages for the whole club.
16. **Tasks**
Who is doing what, by when.
17. **Calendar**
One month view of everything dated in the club.
18. **Equipment**
The club asset register.
19. **Finance**
Income, expenses and the club balance.
20. **Achievements**
Trophies, awards and competition results, with the members involved.

21. Gallery

Albums of club photographs.

22. Documents

The club filing cabinet.

23. Analytics

Patterns and plain-language insights drawn from your own records.

24. Settings, users and data

Club identity, appearance, accounts, notifications and backup.

25. Using it on any screen

The office desktop, a tablet in the laboratory and an officer's phone - all the same records.

26. My account and the audit trail

Your own details, your password, your rights and what you have changed.

27. Search, notifications and shortcuts

Getting to a record in two seconds.

28. Term routines and best practice

A simple calendar of club administration.

29. Troubleshooting and FAQ

Answers to the things that come up most often.

30. Glossary

Terms used in the club and in this system.

1. Getting started

Sign in, find your way around and understand how the club data is organised.

MRHS ICT CLUB MASTER is a single-page application. Everything you see - members, attendance, courses, money - is stored in this browser on this device. There is no server to log into, so the app works offline and loads instantly once it has opened once.

Step by step

- Open the app. The boot screen loads the club data (a first run seeds the full demo dataset and takes a few seconds).
- On the login screen enter your username or email and password, then click Sign in. Tick Remember me on a private device so you stay signed in.
- Forgot a password? Click Forgot password? for the real procedure: there is no email server, so the administrator issues a one-time password from Settings -> Users -> key button and hands it over in person. Passwords are stored as hashes and cannot be read back.
- Still on the shipped demonstration password? A First-time setup panel below the form lists the accounts that are; tap one to sign in, then choose a password of your own - the app insists on it before it opens the club records. Once every officer has done so the panel disappears for good.
- After signing in you land on the Dashboard. The left sidebar lists every module you are allowed to open; the top bar holds global search, the theme switch, notifications and your account menu.
- Press Ctrl+K (or ?+K on a Mac) at any time to search the whole database.

Good to know

- The sidebar collapses into a drawer on phones and tablets - tap the menu icon in the top bar.
- Every module page starts with headline numbers, then filters, then the record table. Detail pages open when you click a record name.
- Dark mode, light mode or follow the operating system: top-bar moon icon, or Settings -> Appearance.
- The footer shows the club name, the academic year and how many records are stored in total.

2. Roles and permissions

Who can see and change what.

Permissions are attached to roles, not to people. When you change somebody's role in Settings -> Users & roles, their menu, pages and buttons change immediately. If a page is off-limits the app shows an "Access restricted" message instead of the data.

Good to know

- Permission levels are view (read only), manage (create and edit) and full (manage + delete).
- Buttons you cannot use are hidden rather than disabled, so the interface stays clean. Restricted pages show a clear explanation instead of an error.
- Only Administrators can open this manual and the Settings module.

Role	Typical holder	Can do
Administrator	ICT teacher / system owner	Everything: user management, settings, background images, club management, club reports, attendance, achievements, notices, sports and events, discipline, feedback, members, certificates, reports, discipline, lessons, Read only information profile, own and own cert
Patron	Teacher in charge of the club	Settings, background images, club management, club reports, attendance, achievements, notices, sports and events, discipline, feedback, members, certificates, reports, discipline, lessons, Read only information profile, own and own cert
President	Club president	Club management, club reports, attendance, achievements, notices, sports and events, discipline, feedback, members, certificates, reports, discipline, lessons, Read only information profile, own and own cert
Secretary	General secretary	Notices, sports and events, discipline, feedback, members, certificates, reports, discipline, lessons, Read only information profile, own and own cert
Treasurer	Club treasurer	Feedback, members, certificates, reports, discipline, lessons, Read only information profile, own and own cert
Training Coordinator	Training lead	Certificates, reports, discipline, lessons, Read only information profile, own and own cert
Project Coordinator	Projects lead	Discipline, lessons, Read only information profile, own and own cert
Member	Ordinary club member	Read only information profile, own and own cert

3. Dashboard

The morning briefing: what is happening in the club right now.

Step by step

- Read the greeting and date at the top: "Good morning, [your name] - here's what's happening in MRHS ICT Club."
- Scan the ten KPI cards: total members, active members, cabinet members, active courses, active projects, upcoming meetings, upcoming activities, attendance rate, reports submitted and certificates issued. Each card links to its module.
- Use the charts to follow attendance and membership over the last months; hover a bar or point for exact figures.
- Check Upcoming events for the next meetings, activities and deadlines, and Active projects for progress bars.
- Catch up with Recent activity and the announcements panel (urgent and pinned notices are featured first).
- Jump straight into work with the quick actions: Add member, Create meeting, Record attendance, Add project, Create activity, Create report, Issue certificate, Add course.

Good to know

- The dashboard is personalised: a signed-in member sees their own attendance, courses and certificates instead of club-wide totals.
- Anything you change elsewhere in the app updates these numbers the moment you save.

4. Members

The register of every club member, with linked courses, projects and certificates.

Step by step

- Open Members to see the full register. Use the search box for a name, member ID, class or skill.
- Filter by membership status, class or club role, and sort any column by clicking its header.
- Click Add member to register somebody: name, gender, class, stream, student number, contact, email, join date, status, club role, skills, interests and notes. Required fields are marked and validated.
- Open a member to see the profile page: attendance rate, courses with progress, projects, certificates, achievements and discipline notes, all pulled from the other modules.
- From the profile use Print profile for the full A4 record or ID card for the credit-card sized membership card.
- Use the row menu to edit, duplicate or delete a record, and Export to download the register as CSV for Excel.
- Click Create member cards to print club ID cards for the members currently listed - see the card section of this manual for sizes and printing tips.

Good to know

- Member IDs are generated automatically in the form MRHS-ICT-M001 and stay unique.
- Deleting a member asks for confirmation and can be undone from the toast; linked records stay behind for auditing.
- Add photos by selecting a file - images are stored in the browser's IndexedDB, not in LocalStorage, so the register stays fast.

Questions

A member left school. Should I delete them?

No - set their status to Alumni (or Inactive). Historical attendance, certificates and reports stay accurate and the member disappears from active lists.

5. Cabinet and leadership

The thirteen club positions, their holders, terms of office and history.

Step by step

- Open Cabinet for the leadership directory, grouped into patron, executive committee and officers.
- Switch to the Organisational chart tab for the hierarchy view, or Cabinet history for previous holders.
- Click Appoint a leader, choose the position, then pick a registered member (their name, contact and email fill in automatically) or type an external appointment such as the patron.
- Record the responsibilities and the term of office - these appear on the printed cabinet list.
- Editing a position that changes holder automatically writes an entry to the history archive so the club keeps a clean record of past cabinets.
- Use Create cabinet cards to print a position card for each leader, or the card button on a record for a single card.

Good to know

- The app blocks two holders for the same position: it will offer to edit the existing record instead.
- Appointing a member also updates that member's club role on their profile.

6. Meetings and minutes

Schedule meetings, take minutes, record decisions and turn them into tasks.

Step by step

- Click Schedule meeting: title, type (General, Cabinet, Training, Project, Emergency, Planning), date, time, venue, chairperson, secretary and status.
- Open the meeting to build the agenda as a numbered list, then invite attendees - members are selected from the register.
- During or after the meeting open Minutes and type the discussion points, decisions and action items. Save as you go; the minutes can be printed on club letterhead.
- Action items become real club tasks: each one gets an owner and a deadline, and appears in the Tasks module and on the owner's dashboard.
- Use Record attendance on the meeting page to mark present, absent, late or excused for every invited member - the same recorder as the Attendance module.
- Print the agenda, the minutes or the attendance sheet from the meeting page, or export the whole meetings register.

Good to know

- Meeting types drive the colour badges you see in lists and on the calendar.
- Minutes, decisions and action items are stored on the meeting record, so a search for a decision finds the meeting too.

7. Attendance

One recorder for meetings, courses, activities, training and events.

Step by step

- Open Attendance and click Record attendance.
- Choose the session type (meeting, course, activity, training or event), then the specific session and the date.
- Mark each member Present, Absent, Late or Excused - or use All present / All absent and adjust the exceptions. Remarks can be added per member.
- Click Save attendance. If the session was already recorded the app updates those records instead of duplicating them, and tells you so before saving.
- Read the dashboards: attendance rate, best and weakest sessions, monthly trend and members below the low-attendance threshold.
- Open a member's history from the member profile, or run a monthly, termly or individual report and print the sheet.

Good to know

- Attendance rate = $\text{Present} \div \text{Expected} \times 100$. "Late" counts as attended; "Excused" and "Absent" do not.
- The low-attendance threshold (default 60%) is set in Settings -> Notifications and drives the alerts.
- QR check-in is a designed placeholder for a later release - the recording and reporting behind it already work.
- Print an attendance sheet before a session so the secretary can take a paper register, then key it in afterwards.

8. Courses and training

Club courses, enrolment, lessons, progress and completion.

Step by step

- Open Courses for the course catalogue (Computer Basics, Microsoft Office, Programming, Web Development, Graphic Design, Networking, Cyber Security, Robotics, Data Entry, Video Editing, Digital Literacy).
- Click Add course for course ID, name, description, instructor, level, duration, number of lessons, start and end dates and status.
- Use Enrol members on a course to add learners; progress is tracked per enrolment with a percentage and a status.
- Maintain the lesson list on the course page so the syllabus is visible to members.
- When a learner reaches 100% with attendance above the threshold the course becomes certificate eligible
 - issue the certificate straight from the course page.
- Print or export the course register, the enrolment list or the completion summary.

Good to know

- Completion rate on the dashboard counts enrolments marked completed against total enrolments.
- Instructors can be club members or external trainers; member instructors are linked to their profile.

9. Activities

Exhibitions, competitions, workshops, outreach and every club event.

Step by step

- Open Activities and click Add activity.
- Choose the type (competition, exhibition, workshop, training, outreach, ceremony, fundraising, meeting, social) and enter title, date, time, venue and organiser.
- Write the objectives and expected outcomes, then select the participating members.
- Move the activity through Planned -> Ongoing -> Completed (or Cancelled) as it happens.
- After the event record the outcomes, attach photos and write the activity report - it can be printed and filed as an official club document.
- Record attendance for the activity from the Attendance module using the same session.

Good to know

- Completed activities feed the participation charts in Analytics and the achievements you record afterwards.

10. Projects

Member projects from problem statement to results, with teams and tasks.

Step by step

- Open Projects and click Add project: name, description, the problem it solves, objectives, leader, team, technologies, start and target dates.
- Set the status - Planning, Development, Testing, Completed or Archived - and the progress percentage.
- Break the work into project tasks with owners, deadlines, priority and progress; the project progress can then be reported per task.
- Keep documents, reference links and screenshots on the project record so everything lives in one place.
- Record results on completion: what was built, who benefited, and the evidence. The project then appears in reports and analytics.
- Print the project brief or the final project report.

Good to know

- The leader and team are chosen from the member register, so a member's profile shows every project they worked on.
- Projects with deadlines feed the notification centre and the calendar.

11. Reports

Weekly, monthly, termly, activity, project, training, meeting and annual reports.

Step by step

- Open Reports and click Create report.
- Pick the report type and the period it covers, then give it a clear title.
- Fill the standard structure: introduction, activities, achievements, challenges, solutions, recommendations and conclusion.
- Record who prepared and who reviewed the report, add the date, and save.
- Use Preview & print to see the report on club letterhead, then print it or save it as a PDF for the school administration.
- Export the whole reports register to CSV when the term ends.

Good to know

- Figures such as membership, attendance and income can be copied from Analytics - keep the analytics page open in another tab while writing.
- Submitted reports are counted on the dashboard's "Reports submitted" card.

12. Certificates

Issue, print and publicly verify club certificates.

Step by step

- Open Certificates and click Issue certificate.
- Choose the type - Participation, Completion, Excellence, Leadership, Training or Appreciation - then pick the recipient (member) and, for course certificates, the course.
- Describe the achievement, set the issue date and signatories (club president and patron), then save.
- The certificate number is generated automatically in the form MRHSICT-2026-CERT-0001 and never repeats.
- Click Print to preview the certificate: cream background, double navy border, crest, decorative seal and two signature lines. Print it on A4 landscape paper or download it as HTML for PDF conversion.
- Use Verify to check any certificate number, or give people the public page - open Verify Certificate in the sidebar (no sign-in needed) and type the number.
- If a certificate was issued in error open the record, mark it Revoked and add the reason; verification then reports it as revoked.

Good to know

- The certificate design is print-first: colours, borders and the background are tuned for paper, not for the screen, and they are identical in the preview.
- Certificates print on a landscape A4 sheet (297 × 210 mm). The app sets the page sideways for the print job automatically, so use the Print button in the preview rather than the browser menu; the certificate then fills the sheet edge to edge without clipping.
- Certificates are landscape and print at true A4 size (297 × 210 mm). Two built-in designs ship with the platform - the default Cream & ornate (cream paper, double gold rule frame, corner scrollwork and a faint centre medallion) and Navy & gold (navy corner blocks, diagonal pinstripes, gold rule frame and gold corner hooks). Pick either one, or set your own image, from Certificates -> Certificate background or Settings -> Club information -> Certificate background: the club crest, the recipient name, the two signature lines and the certificate number always stay on top of the background.
- When using your own background, choose a light, low-contrast design with an empty middle so the name and the achievement text stay easy to read - the app adds a soft white scrim over uploaded images to help.
- Changing the club name, school name or logo in Settings automatically updates every certificate and ID card.

13. Notes & Resources

The club library: lesson notes, tutorials, past papers, templates and useful links.

Step by step

- Open Notes & Resources and click Add resource.
- Choose the category (Lesson Notes, Tutorials, Past Papers, Code Samples, Templates, Guidelines, Syllabi, Software, Links, Other), give it a title and description.
- Attach a file, paste a link, or simply write a note in the rich description.
- Add tags so related material groups together, and set the author and date.
- Use search and the category filter to find material quickly; open a resource from the member view too - courses and resources are visible to ordinary members.

Good to know

- Uploaded files live in IndexedDB and can be opened or saved straight from the resource page.
- View counts show which material members actually use.

14. Membership and cabinet cards

Print CR80 cards for members and club leaders, one at a time or ten to a sheet.

The card studio turns your records into physical cards the size of a bank card (CR80 - 85.6 × 54 mm). Member cards carry the member ID, class, role and status; cabinet cards carry the position, term of office and mandate. Both have a reverse side with the club terms, contact details and a scannable membership code.

Step by step

- Open Members and click Create member cards. The studio opens with the members currently shown in the table already ticked - filter or search the register first to choose a group such as one class or the active members.
- Or open Cabinet and click Create cabinet cards to card the whole leadership team.
- In the studio, tick or untick records on the left, or use Select all, Clear and Active only. Use the search box to find one person quickly.
- Choose the faces: Front only, Reverse only or Front + reverse (which prints one page of fronts followed by one page of reverses).
- Check the live preview on the right, then click Print cards. Eight cards are laid out on each A4 page (two columns of four) with cutting guides.
- To print a single card, open the member or cabinet record and use Membership card / Create position card.
- Use Download HTML if you want to take the sheet to another computer or a print shop - the file contains the whole design and needs no internet.

Good to know

- Print on A4 card stock of 200 gsm or heavier and set the printer scale to 100% - "fit to page" shrinks the cards below CR80 and they will not fit the laminating pouches.
- For double-sided cards, print the front sheet first, then flip the paper and print the reverse sheet. Test the orientation with one sheet before printing the whole batch.
- Cut on the dashed guides, then laminate. Circular corners (3 mm radius) make the cards last longer.
- Photos are used automatically when a member has one; otherwise the card shows the member's initials on a colour block.
- Cards always follow the club name, school name, logo, term and signatory set in Settings -> Club information, so reprint after any change there.
- The membership code on the reverse is a scan-ready placeholder: the design and data are in place, and camera check-in will be enabled in a later release.

15. Announcements

Noticeboard messages for the whole club.

Step by step

- Open Announcements and click New announcement.
- Write the title and message, set the priority - Normal, Important or Urgent - and the expiry date if the notice is temporary.
- Pin important notices so they stay at the top; they are also featured on the dashboard.
- Publish or unpublish with the status field rather than deleting, so the history of what the club announced is preserved.

Good to know

- Urgent and pinned announcements appear first on every member's dashboard.
- The notification centre picks up new announcements for members who are signed in.

16. Tasks

Who is doing what, by when.

Step by step

- Open Tasks and click Add task: what needs doing, who it is assigned to, who created it, priority, deadline and a description.
- Switch between the board view (columns by status) and the list view to suit the way you work.
- Move a task to In Progress or Completed as it advances; overdue tasks are highlighted automatically.
- Meeting action items arrive here automatically with the owner and deadline already set.
- Filter by assignee, priority or status to prepare for a cabinet meeting.

Good to know

- Overdue tasks appear in the notification centre for their owner and in the Analytics task summary.
- The dashboard shows each member their own open tasks.

17. Calendar

One month view of everything dated in the club.

Step by step

- Open Calendar to see meetings, activities, training, events, project and report deadlines and certificate events side by side.
- Use the arrows to move between months and click any entry to jump to its record.
- Colours and icons tell the kinds apart; the legend sits under the grid.
- Record deadlines in the modules themselves (project dates, meeting dates, report periods) - the calendar reads from them automatically, so there is only one place to keep dates accurate.

18. Equipment

The club asset register.

Step by step

- Open Equipment and click Add equipment: asset ID, item, category, quantity, condition, location, who it is assigned to, purchase date and cost.
- Categories cover computers, laptops, projectors, routers, cameras, cables, flash drives, electronics and other - add your own items freely.
- Update the condition as equipment ages: New, Good, Fair, Damaged or Under Repair.
- Log repairs and servicing in the maintenance record so the club can prove how assets were looked after.
- Check the total asset value card when preparing the club budget, and print the asset list for stock-taking.

19. Finance

Income, expenses and the club balance.

Step by step

- Open Finance and click Record income or Record expense.
- Income categories: membership fees, donations, sponsorship, fundraising and school support. Expense categories: equipment, printing, events, training, internet, transport and materials.
- Enter the amount, date, method and receipt number; the reference is generated for you.
- Watch the three headline cards - total income, total expenses and the balance - and the income vs expenses chart.
- Print a period statement for the treasurer's report, or print a receipt for a single payment.
- Export the transaction history to CSV for the school bursar or for the annual report.

Good to know

- Amounts are kept in Ugandan Shillings (UGX) with separators; the currency label is set in Settings.
- Every transaction records who approved it and who entered it.
- The finance module is hidden entirely from roles that may not see club money.

20. Achievements

Trophies, awards and competition results, with the members involved.

Step by step

- Open Achievements and click Record achievement.
- Enter the title, the event, the date and what was achieved, then select the members who took part.
- Attach photos or the certificate document as evidence.
- Achievements appear on the dashboard of the members involved and in the annual report and analytics.

21. Gallery

Albums of club photographs.

Step by step

- Open Gallery and click New album to create a collection (for example "ICT Exhibition 2026").
- Open an album and click Add photo: upload an image or keep the placeholder, then write a caption and pick the date.
- Click any photo to open the lightbox, then use the arrows or keyboard to move through the album.
- Use albums to illustrate activity reports and the club's public displays.

Good to know

- Photographs are compressed and stored in IndexedDB; the placeholder tiles are used where no photo has been uploaded yet.

22. Documents

The club filing cabinet.

Step by step

- Open Documents and click Add document.
- Categories include constitutions, policies, letters, minutes, budgets, plans, forms, reports and other.
- Record the title, owner, date, version and confidentiality, then attach the file or a link.
- Search by title, tag or category; confidential documents are marked clearly so they are not shown on screen during meetings.

23. Analytics

Patterns and plain-language insights drawn from your own records.

Step by step

- Open Analytics and read the insight cards first - they explain what the numbers mean and what to do next.
- Charts cover membership growth, attendance trends, course enrolment and completion, project progress, activity participation, certificates and income vs expenses.
- Hover any chart element for exact figures; print or export the summary for the termly report.
- Use the comparison tables to see which courses or activities attract the most members and which members need support.

Good to know

- Analytics is read-only by design - always change the underlying records in their own module so the history stays honest.

24. Settings, users and data

Club identity, appearance, accounts, notifications and backup.

The platform is styled like a professional management suite: raised white cards over a tinted canvas, gradient data marks, a coloured spine on every card and quiet motion. Eleven complete colour schemes ship with it and Appearance switches between them instantly; the light, dark and system settings each keep the chosen scheme.

Step by step

- Open Settings -> Club information to set the club name, school name, motto, description, contact details, academic year, current term, term dates, currency and document signatories. These values appear on certificates, ID cards, letters and printed reports.
- See the section Using it on any screen for how the layout adapts from a phone to a projector. Use Appearance to pick light, dark or system theme and one of the eleven colour schemes - Azure & Cyan (the club default), Indigo & Violet, Royal & Gold, Emerald & Teal, Midnight & Cyan, Plum & Rose, Slate & Steel, Sunset & Coral, Teal & Sand, Sky & Ash and System Blue. Each scheme paints the whole application at once: the sidebar, the welcome banner, buttons, tables, every chart, ID cards and certificates. The choice is remembered on the device and is kept in the JSON backup.
- In Users & roles create accounts for cabinet members: name, username, email, role, linked member profile and temporary password. The app proposes a one-time password (for example MRHS-kfq4a29) and shows it once, with a copy button, so you can hand it over in person - there is no email server. The officer must replace it with a password of their own the first time they sign in. Change a role, issue a fresh temporary password with the key button, or suspend an account at any time.
- The quickest way to change the background: open Certificates and click the Certificate background button at the top of the page (there is a second one on every certificate page and inside every certificate preview). The dialog shows the two built-in designs - Cream & ornate is the club default, Navy & gold is the alternative - plus an Upload my image button for your own PNG or JPEG up to 4 MB.
- The same window is available in Settings -> Club information -> Certificate background, where you can click either tile to switch designs, remove your image, or preview a real certificate at any time. The design you pick applies to every certificate, every print-out and every download.
- If your background leaves its clear space somewhere else, use Align the content in the same window: choose Top / Middle / Bottom and Left / Center / Right, nudge the block sideways or up and down, and change the text size. A live sample certificate below the controls updates as you drag, so you can see exactly where the name and signatures will land. Reset alignment puts everything back in the centre.
- In Notifications choose which alerts the app raises (meetings, activities, tasks, announcements, low attendance) and set the low-attendance threshold.
- In Data download a full JSON backup, restore from a backup (merge or replace), import records from CSV, and reset or re-seed the demo data.

Good to know

- Back up before every term. The app stores data in this browser only: clearing browsing data deletes it unless you have a backup file.
- Empty every module is the switch-over button: it deletes every record in every module so the club starts on its own data. The sign-in accounts, club information, appearance, the certificate design and the Firebase connection are kept, and the confirmation asks you to type EMPTY so it cannot be pressed by accident.

Press Sync now afterwards and the shared database is emptied too.

- Remove sample records deletes exactly the demonstration dataset the platform ships with, so the club can start on its own records. The sign-in accounts are never touched, and anything the club entered itself - including records an earlier version labelled as sample data - is kept. Reload sample data puts the demonstration club back, and Reset everything wipes this browser and rebuilds it.
- Where to keep those backups (and which cloud service to choose) is set out in docs/CLOUD-STORAGE.md in the project folder: the short answer is a shared school Google Drive folder with dated JSON backups every week, plus a USB copy and a printed termly report.
- The platform can also put the backup into Microsoft OneDrive for you: Settings -> Data -> Cloud backup. Route one writes each backup into a folder you pick once - the OneDrive (or Drive) folder on the PC - and the sync client uploads it. Route two signs in to the school's Microsoft 365 account and uploads straight into the app's own OneDrive folder; it needs a one-time app registration (choose How to set it up in the same card, or read docs/ONEDRIVE.md). Whichever route you use, Restore from OneDrive / folder lists the backups and loads one back, in merge or replace mode.
- Backups never contain sign-in tokens, and the OneDrive connection only ever sees the app folder Apps/MRHS ICT Club Master - never the rest of the school's drive.
- Firebase shared database. When several officers must work on the same live records - attendance on one phone, finance on the desktop - connect the club's own Firebase project in the same card: the club's Project ID and Web API key are already filled in (overwrite them only if the club moves to a different Firebase project), so press Save connection details, then Connect Firebase and sign in with the club's Firebase account. Sync now exchanges records; the switch Keep this device in sync automatically uploads every change by itself and collects what the other officers changed within a few minutes; Upload everything is for after a restore. Twenty-two collections are shared, while users (officer accounts), auditLog, verifications and notifications never leave the device.
- Deletions are final. A record deleted here is marked as deleted immediately, so loading from the shared database never brings it back; the deletion uploads on the next sync. A record deleted by another officer is removed on this device too, unless it was edited here after that - in which case the edit is kept and uploaded.
- The app keeps working with no internet: edits are saved here first and uploaded when the connection returns. Where two officers changed the same record, the later edit (compared by its updatedAt time) wins, and a local edit newer than the shared copy is never thrown away - it is uploaded on the next sync. Setup takes about twenty minutes once (create the project, create the Firestore database, enable Email/Password, paste the security rules); the step-by-step guide is in docs/FIREBASE.md and behind How to set it up in the app. Other options - Supabase, PocketBase, Turso, a Sheets mirror - are compared in docs/DATABASE-OPTIONS.md.
- Restore in merge mode to add a backup's records to what is already there; replace mode wipes first - the app asks for confirmation and shows how many records each option will affect.
- Audit trail. Administrators can open Audit trail from this card (or [#/audit](#)). It lists every record added, edited or deleted - when, by which officer, in which module, with the fields that changed - plus sign-ins, password changes and backups. Filter by officer, module, action or date, search it, export the CSV or print it for the file. The trail stays on this device: it is never shared through Firebase.
- A user who forgets their password cannot recover it - passwords are stored as one-way hashes and nobody, not even an administrator, can read one back. Press the key button to issue a temporary password instead; it works for one sign-in and the officer then chooses their own. The Forgot password? link on the sign-in screen explains exactly this to the officer.

- Deactivating a user immediately ends their access without deleting the audit trail of what they did.

25. Using it on any screen

The office desktop, a tablet in the laboratory and an officer's phone - all the same records.

The platform is laid out for whatever it is opened on. Nothing is hidden on a small screen and nothing is stretched on a large one: the layout is rebuilt at every size, and every control stays reachable with a finger.

Good to know

- Large monitors and projectors. On screens wider than about 1 700 px the content stops widening and centres, so lines of text stay readable and the dashboard does not stretch into thin strips. A 4K screen gets slightly larger type and cards to match.
- Office laptop (1 366 × 768). The full sidebar stays, with tighter spacing, and the shorter height is used deliberately: less padding at the top of the page and a compact banner, so the records are not pushed below the fold.
- Tablet in landscape or a small laptop (around 1 024 px). The sidebar becomes a narrow icon rail - every module is still one tap away, with its name on hover - and two-column panels stay side by side.
- Tablet in portrait (768 px). The sidebar becomes a drawer opened from the menu button, and every data table turns into one card per record, with each value labelled, so a member can be read without dragging the table sideways.
- Phone (360-480 px). One column throughout: one card, one field, one action at a time. Dialogs rise from the bottom edge like a native phone sheet, buttons stretch to full width, small round buttons reach a comfortable 44 px, and text boxes use 16 px type so the iPhone does not zoom the page when a field is tapped.
- Very small phones (320-360 px). Statistic cards stay two-up so the dashboard does not become endless; below 340 px they go full width. Nothing overflows the screen - wide tables always scroll inside their own box, never sideways across the page.
- Phones held sideways. The banner sheds its secondary line so the calendar and the attendance register get the full height of the screen.
- Notches and home bars. The layout respects the phone's safe areas, so nothing important hides behind the camera cut-out or the swipe bar.
- Zooming and large text. Because the layout is measured in relative units, zooming the browser to 200 % gives the tablet layout rather than a broken one - the same is true for a classroom netbook at 1 024 × 600.
- Printing. Whatever screen it was opened on, printing restores the full table (no stacked cards) at A4, and certificates are always A4 landscape.

26. My account and the audit trail

Your own details, your password, your rights and what you have changed.

Every officer - whatever their role - has the same personal page. Open it from My Account at the foot of the sidebar, or from the account menu in the top-right corner.

Step by step

- The page opens on My details: your name, username, email, telephone, role, when the account was created, when you last signed in, and a link to your own member record if one is linked. Edit my details lets you correct your name, email and telephone yourself - your role and status can only be changed by an administrator.
- The Password panel changes your password: current password, new password, repeat it. A strength meter tells you how good the new one is; the club rule is at least 8 characters mixing letters and numbers, and the shipped demonstration password is refused. Nobody can read your password - it is stored as a hash.
- The What I may do panel lists every module with your rights in it: View only, Add & edit or Full control. This is decided by the club's role matrix, not by you. To change it, ask an administrator.
- My recent activity shows the entries you have written to the audit trail - what you added, edited or deleted, and when.
- Administrators also have the full Audit trail (Settings -> Data, or #/audit): every officer's entries, filtered by officer, module, action or date, searchable, exportable to CSV and printable for the club file. It also records sign-ins, password changes and backup imports.
- The trail is deliberately kept on the device - it is never shared through Firebase - and holds the newest 400 entries; Remove old entries keeps the newest 100 when the list grows long.

Good to know

- If a warning at the top of the page says some accounts still use the shipped demonstration password, they are readable by anyone who has the project files: each officer should set their own password promptly.
- Signing out from the account menu ends your session; tick Remember me only on the office computer, never on a shared one.

27. Search, notifications and shortcuts

Getting to a record in two seconds.

Step by step

- Press Ctrl+K, press /, or click the search box in the top bar to open global search.
- Type any name, ID, title or keyword. Results are grouped by type - members, cabinet, meetings, courses, projects, activities, certificates, resources, documents - and open the record when you click or press Enter.
- Use the category chips inside the search overlay to narrow the results.
- Open the bell icon for the notification centre: upcoming meetings and activities, overdue tasks, course and project deadlines, new announcements, low attendance and report deadlines.
- Mark notifications as read individually or all at once; the badge clears when the list is empty.
- Click your avatar in the top bar for your profile, settings, certificate verification and sign-out.

Shortcut	What it does
Ctrl + K / ? + K	Open global search
/	Open global search (when not typing in a field)
? / ?	Move through search results
Enter	Open the highlighted result, or submit the open form
Esc	Close the search overlay, modal or drawer
Tab / Shift + Tab	Move between controls on the page

28. Term routines and best practice

A simple calendar of club administration.

Good to know

- Keep one person responsible for entering data each week - records are only as good as the routine behind them.
- Never delete a record to correct a mistake; edit it, or mark it inactive and add the reason.

When	What to do
Start of term	Update Settings -> academic year and term dates. Register new members and update leavers to Alumni. Confirm the cabinet and appoint vacant positions.
Every week	Schedule meetings, key in attendance minutes after each session, review open tasks and chase overdue ones.
Every month	Record income and expenses, print a statement, check attendance against the threshold and follow up members who are falling behind.
Before exams	Update course progress, mark courses complete and issue completion certificates.
End of term	Write the termly report, print certificates and ID cards, export CSV copies of the main registers, download a JSON backup and file it with the patron.
Once a year	Write the annual report, archive completed projects and activities, and record achievements with photographs.

29. Troubleshooting and FAQ

Answers to the things that come up most often.

Questions

My data disappeared after clearing the browser.

The app stores everything in this browser. Clearing browsing data removes it. Restore from your JSON backup in Settings -> Data; if you have none, the app can re-seed the demo data so you can start again.

The administrator password is lost and no one can get in.

Passwords are one-way hashes, so nothing can read them back. Two real routes remain. First, restore a JSON backup taken while the password was known - backups include the officer accounts, so access returns with them (Settings -> Data -> Restore). Second, if there is no usable backup: Settings -> Data -> Reset everything rebuilds this browser with the shipped demonstration accounts, you sign in as admin with demo1234, set real passwords again, then Restore the club records in merge mode. To avoid all of this, write the administrator password in the club file held by the patron, and download a backup every term.

It says "Storage limit reached".

The browser storage quota is full. Export a backup, then delete large attachments (photos, documents, gallery images) you no longer need. Old backups are the usual culprit.

A page says "Access restricted".

Your role does not include that module. Ask an administrator to review your role in Settings -> Users & roles.

I cannot print a certificate properly.

Choose A4 landscape, disable headers and footers in the print dialog, and turn off "Fit to page" so the border is not clipped. The preview shows exactly what will print.

Two members have the same name.

That is fine - records are identified by member ID, not by name. Use the ID or class when searching.

Can two people use the app on different computers?

Yes - connect the Firebase shared database in Settings -> Data and every connected device exchanges records automatically, even if the internet keeps dropping. Without it each browser keeps its own copy, moved with Settings -> Data -> Backup and Restore.

Can I use it offline?

Yes. Once the page has loaded once, no internet connection is needed; all data and code are local.

Attendance counts look wrong.

Check whether the session was recorded twice, and remember the rule: $\text{Present} \div \text{Expected} \times 100$, with Late counting as present and Excused excluded from expected.

30. Glossary

Terms used in the club and in this system.

Term	Meaning
Term	One of the three school terms in the Ugandan academic year (Term 1, Term 2, Term 3).
Stream	A class group, for example S3 Blue - students in the same class can be split into streams.
Cabinet	The elected club leadership: president, secretary, treasurer, coordinators and representatives, overseen by the patron.
Patron	The teacher appointed by the school administration to oversee the club.
Attendance rate	$\text{Present} \div \text{Expected} \times 100$, where late arrivals count as present.
Enrolment	A member's registration on a course, with their own progress and status.
Certificate number	The unique public reference of a certificate, e.g. MRHSICT-2026-CERT-0001, used for verification.
Asset ID	The unique tag of a piece of club equipment, e.g. MRHS-ICT-EQ-0001.
Merge / Replace	How a backup is restored: add to existing records, or wipe and restore only the backup.
Role claim	The document the app writes in Firebase for each officer (roles/{uid}) saying which club role they hold and whether they may write. The security rules read it, so only officers can change shared records.
First sign-in password	New and reset accounts must choose their own password the first time they sign in - at least 8 characters mixing letters and numbers. The published demonstration password cannot be reused.
Firebase / Firestore	Google's free hosted database. The club uses it so several officers work on the same live records; the device keeps working offline and uploads when there is internet.
Sync now	Exchanges records with the shared database: local changes go up, the other officers' changes come down.
Pending changes	Records edited here that have not been uploaded yet - usually because the device was offline.
Audit log	The internal record of changes made in the system, kept for accountability.
